FEATURE ARTICLES

263 Exploring falls prevention capabilities, barriers and training needs among patient sitters in a hospital setting: a pilot survey
Lex D. de Jong, Su Kitchen, Zi Foo, and Anne-Marie Hill

Patient sitters need more training, and work practice needs to be standardised prior to future research into sitter use for falls prevention.

271 Resident Choice: A Nursing Home Staff Perspective on Tensions and Resolutions
Jennifer A. Palmer, Victoria A. Parker, Dan Berlowitz, A. Lynn Snow, and Christine W. Hartmann

Staff conveyed a lack of clarity on how to realize resident choice when faced with varying tensions, especially the competing goal of resident medical and safety needs.

279 Amplitied hearing device use in acute care settings for patients with hearing loss: A feasibility study
Amber R. Kimball, Cecelia I. Roscigno, Coretta M. Jenerette, Kimberly M. Hughart, Wendy W. Jenkins, Wesley Hsu

Twenty-four patients expressed satisfaction with the amplified hearing device and would use it in future hospitalizations. One patient indicated dissatisfaction. All nurses whom cared for the patients indicated satisfaction with the device.

Health literacy and its correlates in informal caregivers of adults with memory loss
Yun Jiang, Susan M. Sereika, Jennifer H. Lingier, Lisa K. Tamres, Judith A. Erlen

Findings suggest limited health literacy is a potential issue among informal caregivers of adults with memory loss. Appropriate assessment and personalized support are needed for informal caregivers who are at high risk for poor health literacy.

292 Does acute care for the elderly (ACE) unit decrease the incidence of falls?
Ahmed Abdalla, Mehul Adhaduk, Raad A. Haddad, Yanal Alnimer, Carlos F. Rios-Bedoya, Ghassan Bachuwa

An estimated 73% reduction in patient falls was found in the ACE unit compared to non-ACE units. Hospitals may consider investing in ACE units to decrease the risk of falls.

296 The effects of hearing loss on person-centred care in residential aged care: a narrative review
Kristiana Ludlow, Virginia Munford, Meredith Makeham, Jeffrey Braithwaite, and David Greenfield

Six common factors emerged from the data: communication breakdown, the overlap between hearing loss and cognitive impairment, social isolation and reduced social participation, limited access to hearing services, inadequate training provided to care staff, and strategies to improve communication.
Exercise merging physical and cognitive stimulation improves physical fitness and cognitive functioning in older nursing home residents: a pilot study
José Marmeleira, Luís Galhardas, and Armando Raimundo

Almost all physical fitness and cognitive tests were unchanged at baseline measures, but after the exercise program, significant improvements (p<0.05) were found in all physical fitness variables (strength, cardiorespiratory endurance, flexibility and balance) and in the majority of cognitive variables (visual attention, executive functioning and information processing speed).

On-line health seeking activity of older adults: an integrative review of the literature
Susan Waterworth and Michelle Honey

Findings indicate that while older people access on-line health information there are barriers: Low trust, financial barriers, lack of familiarity with the internet and low health literacy levels.

Geriatrics training for nurses in a skilled nursing facility: a GWEP feasibility study
Louise C. Hawkley, Monica Long, Tia Kostas, Stacie Levine, Jason Molony, and Katherine Thompson

This feasibility study describes a mixed methods analysis of nurses' educational needs and barriers to continuing education in a for-profit skilled nursing facility in an underserved, urban environment.

Instruments for detection and screening of cognitive impairment for older adults in primary care settings: A review
Judith Scott and Ann M. Mayo

This review examines the psychometric properties, usefulness, and limitations of brief cognitive screens endorsed by the Alzheimer's, National Institute of Aging, and Gerontological Society workgroups, plus a recently developed brief version of the standard MoCA, all of which can be administered in approximately five minutes.

Inadequate fluid intake in long term care residents: prevalence and determinants
Ashwini M. Namasiyavam-MacDonald, Susan E. Slaughter, Jill Morrison, Catriona M. Steele, Natalie Carrier, Christina Lengyel, and Heather H. Keller

Total fluid intake of long term care residents is well below recommendations. Variables identified to predict intake could help inform strategies and targeted interventions to improve fluid intake for residents of long term care.

Measurement of function in older adults transitioning from hospital to home: an integrative review
Daniel Liebzeit, Barbara King, and Lisa Bratzke

This review reveals important gaps in the functional status instruments' psychometric testing, including limited testing to support their validity and reliability when administered by self-report and limited evidence supporting their ability to detect change over time.
Sleep and other correlates of high-level health in older adults
Eileen R. Chasens, Kyeongra Yang, Lynn M. Bantik, Ji Yeon Choi, and Christopher C. Imes
The assessment of sleep should be expanded to cover dimensions such as sleep quality and sleep disorders to help maintain wellness in older adults.

GAPNA SECTION
Assessment and management of pain in persons with dementia
Alison R. Anderson, Abby Luck Parish, and Todd Monroe

AALNA SECTION
The changing landscape of assisted living
Juliet Holt Klinger

NICHE SECTION
Care of older adults of color: Bridging the gap and building relationships
Sandy N. Cayo

AGS SECTION
Award-winning research at AGS18 links value-based care to interprofessional collaboration, social supports for older adults
Laurie G. Jacobs

DEPARTMENTS

PHARMACY COLUMN
Update on statin drugs for lipid disorders
William Simonson

ASSISTED LIVING COLUMN
Move it before it’s too late: helping older adults accept less residential burden and more assistance
Richard G. Stefanacci and Albert Riddle

ACUTE CARE OF THE ELDERLY COLUMN
Integration of post-acute care and hospice care in adult day services
Mary Beth Happ, Holly Dabelko-Schoeny, and Ji Won Shin
