EDITORIALS

329 Raising the Bar for Optimal Maternal Health

The Raising the Bar for Maternal Health Equity and Excellence initiative supports the implementation of transformative measures that address the underlying factors that contribute to the maternal health crisis.

Edith L. Combs

333 Moving Toward More Person-Centered Language in Maternity Care

Using person-centered language can help clinicians find alternatives that are more patient-centered, empathetic, and inclusive to support the delivery of high-quality health care.

Joyce Edmonds

COLUMNS

STATISTICS FOR NURSING RESEARCH

335 The Role of Confounders in Statistical Analysis

Researchers can limit the effects of study design limitations on research findings through statistical analysis that includes crucial covariates and accounts for confounding.

Oliwier Dziadkowiec

CURRENT EVIDENCE TO GUIDE PRACTICE, POLICY, AND RESEARCH

339 Affordable Care Act and Breastfeeding

The author provides current evidence on telehealth in the prenatal and postpartum periods, including new hybrid care models and the application of telehealth modalities on clinical outcomes.

Summer Sherburne Hawkins

REVIEW

350 Meta-ethnography on Chest Dysphoria and Liberating Solutions for Transmasculine Individuals

Chest dysphoria is a distressing experience for transmasculine individuals, and nurses need to understand this experience to ensure these individuals are supported throughout the life span.

Teresa A. Graziano

RESEARCH

364 Preferred Location for Human Papillomavirus Self-Sampling for Cervical Cancer Screening

As providers consider the implementation of HPV self-sampling for cervical cancer screening, office-based and home-based self-sample collection strategies should be considered.

Erica Liebermann, Holly B. Fontenot, Eunjung Lim, Masako Matsunaga, Gregory Zimet, and Jennifer D. Allen

374 Food Insecurity and Food Access Among Women in Northern New England During the Perinatal Period

The participants' intersecting social determinants of health indicate the need for patient-centered outreach that includes nurses and community health resource specialists to connect women to essential services to mitigate food insecurity.

Sophia Allen, W. Moraa Onsando, Ishani Patel, Chelsey Canavan, Daisy Goodman, and Alka Dev

384 Infant Feeding Experiences of Women Who Recovered From Anorexia Nervosa

For women with histories of anorexia nervosa, engaging in infant feeding presents unique challenges that are widely unreported and difficult for clinicians to identify.

Optimal Maternal Health

The concept of maternal health refers to women's well-being during pregnancy and the birth of a child. Over a prolonged 10-year period, research indicates that women have been placed at the forefront of issues of maternal health and wellness and the promotion of healthy pregnancy and children outcomes through medical research and health care services. However,

many women still experience barriers to optimal health. This article discusses the importance of maternal health and the role of the clinical nurse specialist in promoting optimal maternal health. It also discusses the importance of maternal health in the context of the women's health movement and the role of the clinical nurse specialist in promoting optimal maternal health. The article also discusses the importance of maternal health in the context of the women's health movement and the role of the clinical nurse specialist in promoting optimal maternal health.
